

B2H: Benefits of a Clean-energy Pipeline

The Boardman to Hemingway transmission line will help Idaho Power and other energy companies in the western U.S. meet clean-energy goals and integrate electricity from clean sources.

This clean-energy pipeline will:

Help balance the intermittency of wind and solar energy across multiple regions.

Boost the availability of energy across the West by increasing connections between suppliers and customers.

Decrease the risk of outages or spiking prices due to unexpected demand or loss of generation or transmission capability.

Help keep prices affordable as clean-energy sources become a bigger part of the energy mix.

B2H has been identified by both the Obama and Trump administrations as **CRUCIAL TO THE COUNTRY'S ENERGY FUTURE**

"This project will help stabilize the power grid in the Northwest while creating jobs and carrying low-cost energy to the families and businesses who need it."

*Katherine MacGregor,
U.S. Department of the Interior,
2017*

"Transmission is a vital component of our nation's energy portfolio. This is the kind of critical infrastructure we should be working together to advance in order to create jobs and move our nation toward energy independence"

*Ken Salazar, U.S. Secretary
of the Interior, 2011*
